The first of these is the
 fact that the population
 of the world is increasing
 at a rapid rate. This
 is due to a number of
 factors, including improved
 medical care, increased
 food production, and
 a decline in the death
 rate. The result is that
 the world is becoming
 more crowded, and this
 has led to a number of
 problems, including
 overpopulation, resource
 depletion, and environmental
 degradation. These
 problems are likely to
 become even more serious
 in the future if the
 population continues to
 grow at its present rate.

 Here's to a real good
 baseball player! That will
 probably be a long way
 in sports! Good luck in
 the future
